# Sustainable Urban Planning for Sustainable Development

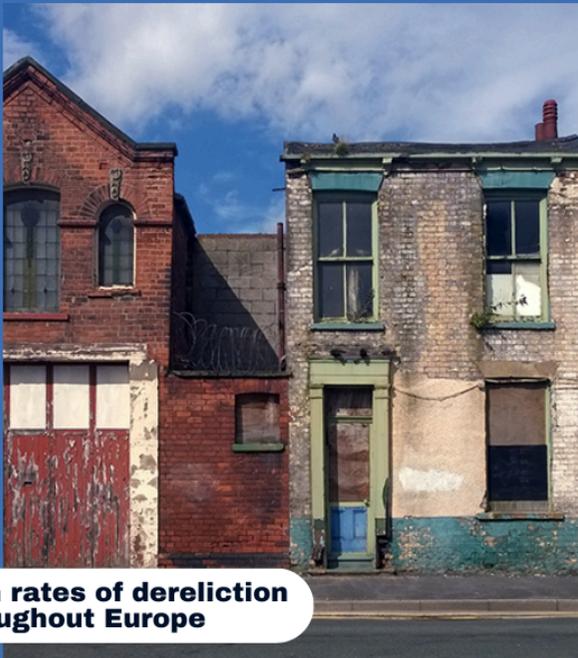

## The Problem

---

As urbanisation continues to rise, Europe's urban areas face significant social and environmental challenges that require complex and integrated solutions.

Over the past three decades, European cities have made efforts to tackle these challenges through various strategies, such as the Urban Agenda for the European Union.

Despite these efforts, government departments often lack the capacity to implement holistic, integrated and comprehensive approaches.

**High rates of dereliction throughout Europe**

**ActiCity, Veszprem, Hungary**

## The Solution

---

The SUP4SUD project explores how urban strategic planning can effectively incorporate sustainable development principles and align local sustainability policies.

**Stakeholder meeting Prague, Czechia**

**Future Vision**

## How we get there

---

The project brings together a diverse consortium of partners from all corners of Europe, to share best practices from a range of models for urban management

Based on our learnings from these shared experiences, the project partners will develop new guidelines for policy makers, with the aim to support sustainable urban strategic planning in local public management models.

The project will disseminate the guidelines to a core group of stakeholders and government representatives in each participating member region, to encourage the integration of sustainable development into urban management plans.

This will, in turn, enhance the future effectiveness of sustainable urban development policies in all regions.
